

Climate change, Pakistan's Situation, Crisis and Sustainable goals

Written by Mariam Abbas

“Climate change is difficult challenge, for the survival of human life.”

Climate change refer the long-term shifts in temperature and weather pattern. The climate on Earth has been changing since 4.5 billion years ago. The main causes of climate change include as, Greenhouse gases, Deforestation, Pollution, Solar, Smoke and Ozone depletion.

In Pakistan, the climate change effect on economy, livelihood people and sustainable development. Agriculture is the major element of word economy, because Recently, the heavy rains and floods destroy the crops and agriculture, then the people face the many problems to arrange the food for theirselves.

The climate change also effects on human health due this changing the many diseases occur in humans such as skin cancer eye problems, lungs cancer etc.

Due the changing of environment, the pollution occurs in human life such as water pollution and land pollution.

The Government take some steps to overcome the climate due to plantation, Dams, avoid vehicles and use more public transports.

The Government also shake the hand with the department of climate and do steps to overcome the climate changing in all over the world.
